

Biodiversity and Sustainability

Adult

This course is for individuals who would like to develop an understand of the links between biodiversity and sustainability within environmental care.

Biodiversity is essential for the processes that support all life on Earth, including humans. Without a wide range of animals, plants and microorganisms, we cannot have the healthy ecosystems that we rely on.

Sustainability is important for preserving our planet and natural resources. Building a sustainable future and cultivating sustainable ways of living will reduce pollution and protect habitats of plants and animals.

55% of UK consumers say living sustainably is important for society and they try to make sustainable choices when they can.
